

What is Coulomb's Law?

Worksheet

Coulomb's law states that the force between two point charges is $F = k \frac{q_1 q_2}{r^2}$, where $k = 8.99 \times 10^9 \text{ Nm/C}^2$ is Coulomb's constant, q_1 and q_2 are the charges, and r is the distance between them.

$$F = k \frac{q_1 q_2}{r^2}$$

Questions

1. Coulomb's law formula is:

- A) $F = mg$
- B) $F = k \frac{q_1 q_2}{r}$
- C) $F = qE$
- D) $F = ma$

2. If the distance between two charges triples, the force becomes:

- A) 3 larger
- B) 3 smaller
- C) 9 smaller
- D) 9 larger

3. Two charges of the same sign will:

- A) Attract
- B) Repel
- C) Have zero force
- D) Neutralize each other

4. What is the approximate value of Coulomb's constant k ?

- A) 9.8 m/s
- B) $6.67 \times 10^{-11} \text{ Nm}^2/\text{kg}^2$
- C) $8.99 \times 10^9 \text{ Nm/C}^2$
- D) 1.610 C

5. Two charges of +2 C and +3 C are 0.5 m apart. Find the force between them.

6. A charge of 5 C and a charge of 5 C repel with a force of 0.05 N. Find their separation.

7. If the distance between two fixed charges is doubled, what happens to the force?

8. Define: State Coulomb's law.

9. Define: What is Coulomb's constant?

10. Define: Is Coulomb's law an inverse-square law?

Answer Key

1. B) $F = k q q / r$ - Coulomb's law: $F = k q q / r$.
2. C) 9 smaller - $F \propto 1/r$, so tripling r divides F by 9.
3. B) Repel - Like charges repel each other.
4. C) 8.9910 Nm/C - $k \cdot 8.99 \cdot 10 \text{ Nm/C}$.
5. $F = k q q / r$ $F = (8.9910)(210)(310) / (0.5)$ $F = (8.9910)(610) / 0.25$ $F = 0.0539 / 0.25 = 0.216 \text{ N}$
6. $F = k q q / r$ $r = k q q / F$ $r = (8.9910)(510)(510) / 0.05$ $r = 0.22475 / 0.05 = 4.495 \text{ r } 2.12 \text{ m}$
7. $F \propto 1/r$ Doubling r $F_{\text{new}} = F_{\text{old}} / 2 = F_{\text{old}} / 4$ The force drops to one-quarter of its original value
8. $F = k q q / r$ - the electric force between two point charges is proportional to the product of the charges and inversely proportional to the square of the distance.
9. $k \cdot 8.99 \cdot 10 \text{ Nm/C}$, sometimes written as $1/(4)$.
10. Yes - force falls off as $1/r$, just like gravity.
